THE CANCERROOT FOR NUTRITIONAL DEFICIENCIES

Take the First Steps to Heal YOUR Cancer. Optimize Your Body's Nutritional Arsenal to Fight!

By testing for and replacing deficiencies in valuable vitamins, minerals, and amino acids in cancer patients before treatment, we can optimize nutrient levels. The normally well-regulated activities of the body's cells and organs are disrupted by cancer and need supportive nutrition. And for patients who've undergone treatment especially with chemotherapy, many are unknowingly deficient in many nutrients.. Effects of cancer treatment on the G.I. tract are common. When chemotherapy kills cancer cells, it may also damage healthy cells, leading to various factors that can complicate eating. Chemotherapy and other targeted therapies can cause diarrhea, constipation, nausea, vomiting, dry mouth, mouth sores, and taste changes. These drugs can also change how nutrients are absorbed in the small intestine. If more than one drug is used the side effects can be compounded. Radiation can cause inflammation of the bowel and damage the G.I. Tract.

Nutrition in cancer patients must be optimized to support healing and optimize treatment.
The test we offer patients in our program is the research-based Genova Nutri Eval which will reveal more than just nutritional deficits. Patients will learn about their bodies' levels of toxins including heavy metals, health status of their microbiome and digestive system, and mitochondrial function, or dysfunction.

The CancerRoots Nutritional Deficiencies Program:

1. An Initial 60-minute virtual visit with Jen Bouchard APN to review your medical history, cancer and treatment history, and any symptoms that may be related to nutritional deficiencies which might include fatigue, skin changes, hair and/or weight loss, and joint pain can arise. With damage to the G.I. tract food intolerances also become apparent. The Genova Nutri eval will be ordered after your visit and sent to you at your home. You will need to find a lab to get a blood test as part of this program. Generally, costs for patients are generally $25-$50 for a lab draw visit.
2. After you complete the test and the results come in, you will be notified and at that time you can schedule a follow-up appointment to discuss these results with Jen Bouchard, find out what the results mean in detail, and what you can do to optimize your nutritional status for healing.
3. The CancerRoots Nutritional Deficiencies program includes testing with the Genova Nutri eval (a $429.00 value) is $949.00.
